Non-Final Official Action

Specification

The title of the invention: "Microprocessor" is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The following title is suggested: "System for Microprocessor Address Bus Testing".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Springer (United States Patent 4,625,313).

As per claim 1, Springer discloses:

A microprocessor comprising:

a CPU which performs certain arithmetic operations (column 2 lines 58-63, column 3 lines 36-39);

an address bus connected to the CPU (column 2 lines 58-63, column 3 lines 36-39);

a circuit unit which utilizes an address on the address bus (column 2 lines 63-65); and

a test circuit which generates a test address for testing the circuit unit (column 5 lines 33-47 and figure 4).

As per claim 3, Springer discloses:

The microprocessor as claimed in claim 1, wherein the test circuit comprises:

a control circuit which contains a register storing control values (column 3 lines 16-20);

an address decoder which receives the control values from the control circuit (column 3 lines 16-20);

a bit pattern register which generates a bit pattern to produce a test address (column 3 lines 33-47 and figure 4);

a rotator which makes a change to the bit pattern (figure 4 step h: the method is repeated with a different address from the pattern); and

a bus driver which receives the test address and drives the address bus (column 3 lines 10-13).
